For the Week Ending July 26, 1873,

our last Review of the mining matters of Ely and adjacent districts, though not marked by excitement, have been far from barren of results.

their completion means the resumption of work on the great mine of the camp, on a scale of unprecedented magnitudemines that have laid idle for months - and despite the determinate downward tendency of the stock market, that feeling of in some places over ten feet wide confidence in our own resources, which the RECORD has ever striven to inculcate obbers of San Francisco, only to be obtained by the inhabitants of a camp that has been fully and thoroughly tested by results, is ours. The men who fenred not to venture muscle and money on the wines of Ety District, when the former were undeveloped and the latter unknown, are not likely to flinch now, , when the result of their intelligent enterprise has rendered those mines famous throughout the civilized world, and from

second city in the Silver State. The day of doubting is past-the era of bullion production is but just begun. Who talks of despondency in our midst? Let him go out among our silver-ribbed kills, and see, in fifty places, men without a dollar, with nothing but health port the other half,) to sink shafts in the solid rock, where nothing but powder and drill can force its way, without a hope of a return till a depth of two and three hundred feet is attained. Wherein what other camp is, such a spectacle to be witnessed? Echo answers, Where? Only yesterday a practical proof of the soundness of their reasons for the "faith that is in them" was afforded by the "strike" in the Havana mine, noticed more particularly under the proper head.

Highland sends us an excellent account of mining affairs within herborders—and in Bristol we have to report continued activity, and a development of remark-

able richness in the Sultan mine.

HAVANA.

Under the polite guidance of Messrs. Craig and Baker, two of the owners in the mine, we yesterday paid the Havana a visit, to see if the reports of the rich strike were based on the solid founda-tion of pay ore. The vein showed itself A perpendicular shaft has been sunk to A perpendicular shaft has been sunk to the depth of 140 feet, at which point the ledge was cut. It was about five feet wide, with the smoothest and best devide, with the smoothest and best devide. ow seam of ore on the surface. dicular shaft has been suck to fined walls we have ever seen in the camp, and dipping to the south at an angle of 15 deg. From this point it gradually widened, till it was necessary to leave it, which was done, and an incline carried down on the foot wall. Where the hang-

ing wall was left, the vein was about nine eet wide. The incline has now attained a depth of 110 feet from the bottom of the perpendicular shaft, and about six feet from the bottom, the rich strike to which we alluded, was made. The rich streak is now fully the width of the shaft, and dipping towards the hanging wall. What is its extent is therefore yet un-known, but about thirty feet above a cross-cut was run fifteen feet, withou striking the hanging wall, from which fact it is reasonable to infer that it will prove to be a very large body of ore. Assays of the mass ranged from \$120 to \$2500 per ter.

Drifting and stoping on the ledge—in excellent ore. The character of the ore appears to be somewhat different from heretofore, and the change is decidedly for the better. The ledge maintains its size throughout. There are about 150 tons of ore on the dump, 60 of which is first-class, high-grade ore. It is the in-tention to re-commence sinking the main shaft te-morrow, and sink another 100 shaft, each compartment 4x4 in the clear.

If anything is to be predicated on present developments, the Portland will soon be, what we have dways believed it was, one of the great mines of Ely District. A furnace is in process of erection for the reduction of the heavy galena ores which 75 feet to the south of the croppings of the vein, which, it is expected, it will be a are very rich in silver. It will be in operation about the 1st proximo.

SILVER CHIEF. The Silver Chief is one of the oldest The Silver Chief is one of the oldest locations in Ely District, and as far as developed, shows a large amount of high-grade ore. Two shafts have been sunk—one on the ledge 40 feet, and a main working shaft, which is down 105 feet, and a drift ran from the bottom to cut the ledge 28 feet. From the developments in the upper shaft the probability ments in the upper shaft the probability of striking a large body of rich ore when the drift is pushed to the ledge is more than favorable. It is intended to resume work very shortly. That such a mine as this is allowed to remain idle is one of the mysteries of mining which only superintendents and directors can explain

SPHING MOUNTAIN TUNNEL. Still sinking on No. 3 ledge with constantly improved prospects of soon reaching good ore at this point. The ledge is now about 3 feet wide, of splen-did quality of quartz and becoming more compact and formal as depth is attained. The ground laving been quite bard, progress has been less rapid for the past two weeks-at present much better headway is being made. Working

MAZEPPA. The machinery of the new hoisting apparatus works to a charm, and the main shaft is being rapidly sunk. It is still in ledge matter, but the occurrence of bunches and stringers of ore is becom-ing more frequent, and altogether the prospect of soon striking the ledge may e said to be extremely good. CONDOR.

The stock of this once favorite mine re-appeared last week for a brief moment on the San Francisco Stock Board—the scene of its former triumphs. The price was modest—twenty cents, if our memory serves us correctly, per share—and very few shares at that. Nevertheless we have reason to believe that the Condor is a really good mine, and only needs the judicious expenditure of capital to make it all that was ones claimed for it. We hear it rumored that it is intended to resume work in this mine ere long. SOUTH SIDE.

Work is being steadily prosecuted in the shaft with a full force of men. No particular change in the character of the rock, which is fine working ground. EMPEROR.

This mine, which some months ago attracted considerable attention in min-ing circles, has been lying idle for some time. We learn that it is in contemplation to start up work again shortly.

The Monarch is a large strong vein, running parallel with the Condor mine,

The new and magnificent heisting works of the Raymond & Ely Company are fast approaching completion, and of ore. Two small prospecting shafts have been sunk on the ledge. TREADER.

This ledge runs parallel with the Silver on a scale of unprecedented magnitude—
the same may be said of the Silver Peak
mine. Work has been resumed on many
work in the ledge about 80 feet. The ledge stands perpendicular, with well defined and smooth walls, and contains some good ore. The vein is very large—

BAYMOND EXTENSION

This mine shows strong croppings on that sense of independence of the stock obbers of San Francisco, only to be obtained by the inhabitants of a camp that has been fully and thoroughly tested by the substance of the strange of a distance of fully 200 feet, assays from which have gone as high as \$150 to the ton. An incline has been sunk on the vein 40 feet, showing two feet of quartz with a streak of rich ore in the banging wall. This mine is supposed to be the northerly extension PIOCHE PHENIX.

Work is again being steadily and systematically prosecuted on the Pioche Phenix mine, under the supervision of the new Superintendent, Mr. Nelson, with excellent prospects. Drifts are be-ing run from the new shaft at the depth an unregarded hamlet made Pioche the in good condition for the extraction of ore as rapidly as possible. PIOCHE.

Working the same force as heretofore working the same force as neretolore, and taking out ore as usual. During the past week upwards of 135 tons of ore have been shipped to the Amador Mill. Have nearly \$5,000 in bullion on hand, and expect to ship \$10,000 this month. and hope to aid them, starting deliberate-ly to work, (in little companies of six and and eight, half working for wages to sup-partment 4½ by 4 feet inside the timbers. PORTSMOUTH.

Opened by a perpendicular shaft twen-ty-five feet in depth, sunk on the vein. The vein has averaged about four feet in width, and in the bottom of the shaft shows bunches of ore, assaying in the neighborhood of \$300 to the ton. Work, which has been suspended for three weeks, will be resumed in a few days.

VULTURE. Work is being steadily pushed forward on this promising mine, and every foot the quantity of ore increases. What they take out is of high grade, and there is every prospect of its soon taking rank among our first-class mines.

CHAPMAN MILL AND MINING CO. As the drift from the shaft on the 420 foot level penetrates the mountain, the indications of the close promixity of the ledge grow stronger. Working night and

RAYMOND AND ELY. The hoisting works are being rapidly put in place, and we learn from Captain Day that he expects to resume work on the mine about August 1st.

we re-produce: "A shaft has been sunk till the hole is enlarged, but by holding on the ledge, about 150 feet, showing a candle in the mouth of the opening i throughout the entire distance a well can be seen to exist for many feet fur defined lode, varying in size from six to eighteen nucles. All the stratas of the country rock lie flat, or nearly so, while the vein, standing nearly vertical, cuts them squarely in two, proving beyond a doubt that it is a true fissure vein. In the bottom of the shaft the men have encounterd a very singular formation. On both sides are large cavities, and in one corner the bottom of the shaft abso-lutely dropped out, showing a regular cavern, perhaps a foot wide and not less than ten deer. than ten deep. The whole place appears to be badly broken up, but what ore there is is much richer than heretofore, there is is much riener than heretolog, and there can scarcely be a doubt that on reaching a firmer formation below, the vein will be found solid and of pay-ing quality." Since then the shaft has the vein who be found some and our pay-ing quality." Since then the shaft has been thoroughly timbered, and what sinking has been done, shows the vein slightly increasing in size. Working three men on a shift.

CARGLINE The main shaft, old works, thoroughly timbered, is 200 feet deep. Work was recommenced last Monday by Captain Hardy, and the shaft has been sunk ten feet during the week. It is in contemplation to erect hoisting works on this mine very shortly. This shaft was started

CHIEF OF THE HILL.

The shaft from the Burke tunnel is The shaft from the Burke tunner is now down 270 feet. There is but little change to note in the appearance of the stopes and drifts, the vein everywhere maintaining its size and quality. Taking out some ore every day. There are maintaining its size and quanty. Laking out some ore every day. There are about 70 tons of ore on the dump. As soon as the road to the mine, which was destroyed by the railroad grading, is repaired, they will commence shipping to he mill.

CHIEF EAST EXTENSION. Drifting east from the main shaft on the 225-foot level. The ledge has improved very much during the past week, and now looks exceedingly well. Taking out ore all the time, the average value of which is \$150 per ton.

NEWARK. We are still without reliable intelligence regarding this mine. To the many stockholders who have applied to us to know why such intelligence is not made public in our Mining Review, we have only to say we cannot obtain it.

ALPS. The lower drift is being steadily driven ahead, and it cannot be much longer be-fore the ledge is struck, when a big thing may be confidently looked for. Taking out a large amount of high-grade ore from the upper works.

BOWERY. A new contract has just been let to sink the main shaft 100 feet deeper. Work on the contract was commenced yesterday. When this 100 feet is comyesterday. When this I pleted the shaft will pleted the shift will be 400 feet of 500 feet, and the mine is being placed deep. Taking out some good ore all the

The new hoisting works on this mine are completed, and if it had not been for a difficulty in obtaining water, steam would have been started up yesterday noon. - They will be in full operation to morrow morning.

SILVER PEAR.

EXCHENTOR? Drifting, at the depth of 280 feet, from the new shaft to make the connection with the old workings, and also drifting from them with the same object. They are now nearly through, as the workmen can hear each other very plainly.

MEADOW VALLEY. No change of consequence to note.

Taking out about the same quantity of ore, and will ship the same amount of buillon as the past month.

ORIGINAL DEXTER

or the Week Ending July 26, 1873.

The two weeks that have elapsed since our last Review of the mining matters our last Review of the mining matters (Monance).

Situated between the Montana and Emperor mines. This is a very old location, and may yet become an important mine. Shaft in the ledge 20 feet, and a small drift run on the ledge, which is about two feet wide.

MONANCE.

Situated between the Montana and Emperor mines are reported by the ledge never looked better.

Still sinking the shaft, which is sow about two feet wide.

MONANCE.

An incline lifty feet deep has been sunk on the vein, which is well defined, with piles of literary matter at Charley Wiedsmooth walls and a clay casing, showing erhold's there are any number in Pioche ore in bunches.

Work in the old works is still seas. We we were informed last night just MERIDIAN.

maintains its character. Sinking stead-Work is being rapidly prosecuted in the

The seam of ore in the drift shows no material variation in size or richness.

PIOCHE WEST EXTENSION. Sinking the main shaft, which is now about 600 feet deep. Expect to reach the ledge shortly.

BROOKLYN. St'il sinking the winze from the 75-foot level on the ledge and taking out some good ore. LA PAZ

Work is still suspended in this mine, WASHINGTON AND CHECK. There is no material change to note in

this mine. Its production is about what it has been for some weeks past.

Highland District. LONE STAR.

To Mr. Jos. M. Maguire, of San Francisco, one of the owners of the Lone Star mine, who has just returned from making a personal examination of the premises. we are indebted for the following facts in regard to it: The Lone Star is situated about two miles from the M-ndha Mill, in the milst of a large tract of timber lands owned by the company. It is a strong, well-defined vein, has been opened to the depth of 8 feet by a shaft, at which point it shows a fine body of high which point it shows a fine body of high grade ore fully justifying, in the opinion of our informant, the extensive developments that the company propose immediately undertaking. Assays of the ore range from \$150 to \$600 per ton. Mr. Maguire informs us that a large additional force of men will be put to work within twenty of men will be put to work within twenty days. Mr. Maguire with Mr. Perisch, the Superintendent of the Lone Star, under the guidance of our genial ex-towns-man, like Phillips, (the man who "knows how to keep a hotel" at Highland,) visited the

MENDIIA MILL. indications of the close promixity of the ledge grow stronger. Working night and day.

MONTANA.

The character of the rock in the lower drifts has changed materially in the last tew days—being much softer, and heavily stained with mineral. Evidently the ledge is not far off.

RAYMOND AND ELY.

Bristol District.

SULTAN. The cave of which we spoke as having been discovered in this mine last week, proves to be of considerable extent. It has been entered for a distance of 20 feet, where it closes up to so small an aparture that a man cannot get through

Running the main tunnel shead and drifting to open the mine more thoroughly, preparatory to taking out ore on a large scale. Are now extracting about

20 tous per day.

THE NUISANCE BUSINESS,-The first nuisance case brought before Justice Stoutenburgh was that of a Chinaman for keeping a hog pen; "John" pleaded guilty, was fixed one dollar and costs and allowed five days time to remove his hog pen. The second case was that of an American citizen of African descent: his case was disposed of just as the China-man's was. The third case was that of a white man; but having a jury to try the case, a disagreement occurred and the jury was discharged. Then Jus tice Stoutenburgh granted the Chinaman and the negro five days' further time to and the negro ave days turner time to to comply with the order, hoping in the meantime that some white man may be dealt with as the Chinaman and negro have been. He says if nothing is done to nave nech. He says if nothing is done to enforce the law against white men, he will grant the descendant of Confucius and the son of Ethiopia thirty days fur-ther time. This we regard as a very proper course, showing a disposition on the part of the Justice to apply the law fairly without regard to race, color or previous condition of servitude.

THE PROPOSED RESERVITION. - By private letter from Daniel Bonelli, who esides at St. Thomas, to Macon Miller, of this place, we learn that a remonstrance is about being gotten up against the establishment of the proposed Indian reservation on the Muddy. The people of Pioche will be afforded an opportunity of joining with the settlers on the Munidy in a protest against the reserva-tion scheme. The sentiment of the peo-ple on the Muddy is unanimously against ple on the Muddy is unanimously against it, and we very much hope their wishes may be respected.

TRANSFER OF REAL ESTATE, -Our irreprissible friend Johnny Lynch, says times are so hard that he feels compelled to invest a portion of his losses in real estate; and to that end has purchased from H. Matthey, his residence on Me-Cannon street. The property comprises the dwelling and three full lots, sur-rounded by a substantial fence, and is one of the most charming spots for a residence in Picche. We have not learned positively the price paid, but understand it was in the neighborhood of \$2,000

Gave Boxes.-Yesterday Rosa Stein, under indictment for assault upon another fair and frail creature with intent to commit number was admitted to bail in the sum of \$2,000. Phil Mulloy, indicted for assault with intent to commit great bodily harm, was bailed at \$3,000. Ferguson, indicted for assault with intent to do great bodily harm, also gave bonds to appear at the

ARRIVED YESTERDAY .- F. F. Marx's ox train-Wm. Barnes driver-arrived yesterday morning in 16 days from Toano, loaded with eight tons of malt for the Philadelphia Brewery. The train consisted of seven yoke of cattle and two wagons. This is the quickest time ever made between Toano and Pioche by ox

A NECESSARY PERCAUTION. - Near the entrance of the County Jail is a large sign upon which is painted "No talking allowed with the prisoners." This is allowed with the prisoners. This is a necessary precautionary measure, as by allowing prisoners too much latitude in the matter of communicating with friends on the outside, there is dan-ger that mischief may be concected.

Ir is sai to think that with all the advantages of free schools, there are people who can't read; it is a pleasure to reflect, however, that with stacks and who will rush to obtain a supply of Sunday reading this morning

pended, owing to bad ventilation. The before the paper went to press, that a new working shalt is being rapidly sunk. very unportant strike of rich ore had The ore in the bottom of the shaft Portland mine. We have a specimen in maintains its character. Sinking stead-our office which looks splendid.

have not all been summoned, we defer shaft. It is being sunk by contract-three shifts.

Locise.

giving a list of their names for the present. The venire is made returnable on Tucsday, August 5.

In Mr. Nelson's office, on the summit of the divide, certainly as cool a place as can be found in town, the thermometer at 3 o'clock yesterday afterdoon, stood at 95 deg. in the shade.

SERVICES AT THE EPISCOPAL CHURCH. Morning service at eleven o'clock. Sunday school at 2 p. m., and evening service at eight. Henry L. Badger, Rector To BE ABBAIGNED.-To-morrow morn-

ing the various persons indicted by the Grami Jury will be arraigned before the District Court. John Kelley arrives on to-day's stage

THE Grand Jury stands adjourned until

Westnesslay morning.
